Dear Dr. Lin

I want to let you know how much you have done for me in such a short time. I came to you with a multiple of medical problems and health concerns.

Recently, I checked my blood pressure and was shocked. It was down to see the readings were so much lower than before. My primary care doctor put me on a ' beta blocker ' medicine that left me confused and nauseated and my blood pressure did not change much. In short, I am elated to have met you and to have gotten news and even better results on the rest of other problems for 60% improvement in 6 weeks treatment and supplement intake.

I have more problems and more hope I can be healthier without "Side-Effects ".

I will keep you apprised of my great results and hope you share my progress with others.

Thank You, Dr. Lin "Dr. Frankenstein "

G Johnson
