

## **Stomach Cancer**

**9/9/2015**

I had a routine physical examination on 6/26/2015. An gastric endoscopy was performed and a big mass 5 cm found in my stomach which shows as gastric adenocarcinoma with signet ring cells confirmed with biopsy. A clinical CT scan was done on the same day to make sure the tumor is real and whether it spreads out or not.

On 6/28/2015, the stomach biopsy report came back, it definitely showed that it is an invasive malignant tumor called gastric adenocarcinoma with signet ring cells, then my family doctor recommended me to go to the Mount Sinai hospital in Manhattan for surgical operation.

The surgeon at the hospital refused my request for the surgery, he said that my tumor mass is too big and is not good for operation. It also shows that it has the phenomenon of metastasis and surgeon wanted me to get chemotherapy to shrink down the tumor first before the surgical procedure. I know the bad consequences of chemotherapy are, so that I resolutely opposed the proposal.

Later, a friend of mine is an MD, radiologist, who recommended me to see Dr.Lin, a naturopathic doctor. On 7/1/2015, after consulting with Dr.Lin, I was convinced with his strategic protocols and followed his rational advice doing 5 treatments within 7 days plus taking natural supplements. On 7/2/2015, I had second endoscopy with biopsy still confirmed the tumor is an invasive malignant cancer.

After a week later, 7/6/2015, my family doctor and the surgeon let me do another endoscopic ultrasound and the whole body CT scan. After finishing the procedures on that day, my friend wanted to get the final report or any information related to my conditions. They only gave us the name of the surgeon and also the name of anesthesiologist and nothing was given.

Two days later, my surgeon agreed to do the surgical procedure for me. It was because they found out that my tumor shrunk from 5 cm to 1.9 cm, there was 3 cm shrinkage that is why they wanted to do the operation on me.

On the operation day, 7/9/2015, they found out my tumor even shrunk more

than 1 cm, that means my tumor almost gone with only few tiny pieces in my stomach, but they never told me about it. The laparoscopic distal subtotal gastrectomy was performed which is an minimal invasive surgery on that day. However the surgeon at the hospital is a very responsible doctor, at last I would like to give SPECIAL THANKS to Dr. Lin who has super extraordinary medical trainings to get rid of my CANCER.

If they let me know my tumor shrunk down from 5 cm to 1.9 cm on 7/6/2015, I would not agree to do the operation on 7/9/2015 even though it is an minimal invasive surgery but still it hurts my body.

Finally they found out NO MORE TUMOR or CANCER after the surgery, everything is NORMAL. NO CHEMOTHERAPY required....
